

"Automatic decompression system" L 48-70 N-V-W

Air Cooled Engine LN-LV-LW Series

Our single-cylinder, air-cooled direct injection diesel engines are EPA & CARB exhaust emission compliant and utilize a counter-balancing system for smooth, high speed operation. Multiple PTO shaft are available along with electric or recoil starting. **For L70 and L48 series is now available the integrated automatic decompression starting system.** The application of this feature allowed the user to avoid any action except pulling re-coil handle or key switching.

This option is now available for L48 and L70 engines. For more details and installation on your engine please contact our Sales Representatives

Engine Type	Air Cooled, 4 cycle, Vertical Cylinder
Fuel	Diesel
Number of Cylinders	1
Bore x Stroke	see the specific model data sheet
Combustion Type	Direct Injection
Aspiration	Natural Aspiration
Valves per Cylinder	2
Other data	see the specific model data sheet
Other options & configurations	see the specific model data sheet

Features

Low Vibration & Low Noise

Superior vibration and noise reduction is achieved through the use of precision balancers. This leads to operating comfort even under long work hours.

Compact, Diesel Injection Engine = Easy Installation & Low Fuel Consumption

Keeping with the tradition of compact design, the L series is simple to install. It fits in cramped spaces without sacrificing power and performance. YANMAR's proprietary direct injection technology allows the engine to sip rather than gorge on fuel. This means lower running cost in the world of rising fuel prices.

Quick and Easy Start

Starting is a breeze with the standard recoil starter and auto-decompression system
